

CRITICAL RADIANT FLUX (ISO 9239.1)

This test assesses burning behaviour and spread of flame of horizontally mounted floorings exposed to a heat flux radiant gradient in a test chamber, when ignited with a pilot flame. It also gives details of assessing the smoke development.

This method is applicable to all types of flooring e.g. textile carpet, cork, wood, underlays, rubber and plastics coverings as well as coatings. Results obtained by this method reflect the performance of the flooring, including any substrate if used.

Requirements: The New Zealand Building Code calls up the ISO 9239.1 for flooring products per Specification C/VM2 Section 4.7, C3.4 (b).

Sample size: We require 6 specimens - 1050mm x 230mm of which, 3 are in the length direction and 3 are in the width direction – See diagrams over page.

Test code: T45C

Company name
